

This is a simple paragraph Which continues at the next line
And this is the next paragraph

1 Lists

@Prefs style is very useful for items. Note that prefs should be indented more then surrounding paragraphs

- enumerate (this text is in paragraph inside an item):
 1. one (it should be more indented then paragraph)
 2. two
 3. three
- itemize:
 - one
 - two
 - three

Consecutive elements of the list are framed by the itemize/enumerate environment, if there is no empty lines between them. So:

1. one
 2. two
 3. three
-
1. one again
 2. two

2 Math

Inline math can be inserted in paragraph in back quotes: $a + b = c$ — this is inline math

For block math @Prefs syntax is used:

$$a + b = c$$

Next lines will be framed by align* environment and \\ will be added between them automatically

$$\begin{aligned}a + b &= c \\ (a + b)^2 &= d\end{aligned}$$

$$a + b + c = 0$$

Note that the last equation will be framed by separate align*, because there is an empty line before it.

To be continued...
